

Data Strategy

INWT Statistics GmbH

Find the Right Culture, People, Projects and Technology to Start Leveraging Data

Price at € 12,000 (excl. VAT)

Become a Data-Driven Company

Our data strategy package is for corporate executives who are searching for digital transformation or accelerate existing digital development. It is comparatively easy to set up your own data science team. However, high-quality work depends not only on the theoretical knowledge of the team but also on the collective experience. We promote project-relevant competencies and best practices for the implementation of data strategies, machine learning and software development projects. We take executives through a digital maturity roadmap, which has been developed based on our own long-term collective experience. In particular, we share our best practices for the daily data workflow efficiency and leverage unused data for business intelligence and reporting.

Kickstart Your Data Strategy

Do you have any idea of what your data science strategy should look like? If you already have a data and digitalization strategy, do you have the people, resources, and know-how to implement it? With our collective expert knowledge, we would be pleased to make a customized offer that fits your company values and strategies.

Core Benefits

- **Identification of Challenges:** We help executives deep dive into their business operations to explore where automation and digitization can save time and cost for their stakeholders.
- **Strategy Development:** Develop a data strategy and roadmap around your company culture, values, core competencies, talent, and technologies.
- **Executive-level Workshop:** C-level Workshops to identify the most impactful projects to your business operations, long-term data vision and strategy workshops that allow corporate leaders to coordinate their roadmap to their existing talent and resources to obtain digital transformation.
- **HR Hiring Support:** Supporting HR hiring and coordinating job interviews for relevant positions such as head of data operations, data scientists, data engineers, etc.
- **Technology Recommendations:** Initial coordination with IT for best practice and software advisory. We can offer recommendations on version control with Git and GitHub, Continuous Integration with Jenkins, Docker, Amazon Web Services (AWS).

Who We Are

INWT was founded in 2011 as a university spin-off. We are a **full stack data science consultancy** and specialize in data science software solutions. We combine extensive, hands-on expertise in data science with the latest cloud technologies to build reliable software systems. Transparency, integrity, and adherence to the highest quality standards are the hallmarks of how we work and build relationships with our clients.

INWT in Numbers

INWT currently has 17 employees, having more than 100 years of experience, 217 successfully completed projects, 7 PhDs, expertise in 10 scientific fields, and more than 300,000 lines production R and Python code under our belts. We host dozens of micro services, including dashboards, REST APIs, databases, batch jobs and event driven

real time analytics applications for our clients. Our services respond to more than a million requests per day, process hundreds of GBs of data daily and utilize state-of-the-art machine learning algorithms.
